

**UF\_MTX2\_copy** [\(view source\)](#)

Defined in: `uf_mtx.h`

**Overview**

Copies the 2x2 matrix elements from the source matrix to the destination matrix

**Return**

void

**Environment**

Internal and External

**Required License(s)**

gateway

```
void UF_MTX2_copy
(
    const double mtx_src [ 4 ] ,
    double mtx_dst [ 4 ]
)
```

|              |                      |        |   |
|--------------|----------------------|--------|---|
| const double | <b>mtx_src [ 4 ]</b> | Input  | Source matrix                                     |
| double       | <b>mtx_dst [ 4 ]</b> | Output | Destination matrix <code>mtx_dst = mtx_src</code> |

**UF\_MTX2\_determinant** [\(view source\)](#)

Defined in: `uf_mtx.h`

**Overview**

Calculates the determinant of a 2 x 2 matrix.

**Return**

void

**Environment**

Internal and External

**Required License(s)**

gateway

```
void UF_MTX2_determinant
(
    const double mtx [ 4 ] ,
    double * determinant
)
```

|              |                    |        |                                      |
|--------------|--------------------|--------|--------------------------------------|
| const double | <b>mtx [ 4 ]</b>   | Input  | Matrix whose determinant in required |
| double *     | <b>determinant</b> | Output | Matrix determinant                   |

## UF\_MTX2\_identity [\(view source\)](#)

Defined in: `uf_mtx.h`

### Overview

Returns a 2 x 2 identity matrix.

### Return

void

### Environment

Internal and External

### Required License(s)

gateway

```
void UF_MTX2_identity
(
    double identity_mtx [ 4 ]
)
```

|        |                           |        |                 |
|--------|---------------------------|--------|-----------------|
| double | <b>identity_mtx [ 4 ]</b> | Output | Identity matrix |
|--------|---------------------------|--------|-----------------|

## UF\_MTX2\_initialize [\(view source\)](#)

Defined in: `uf_mtx.h`

### Overview

Returns a matrix formed from two input vectors.

### Return

Return value:

0 = Success (vectors define a valid matrix)

1 = Matrix cannot be defined

### Environment

Internal and External

### Required License(s)

gateway

```
int UF_MTX2_initialize
(
    const double x_vec [ 2 ],
    const double y_vec [ 2 ],
    double mtx [ 4 ]
)
```

|              |                    |       |                                      |
|--------------|--------------------|-------|--------------------------------------|
| const double | <b>x_vec [ 2 ]</b> | Input | Vector for the X-direction of matrix |
|--------------|--------------------|-------|--------------------------------------|

|              |                    |        |                                      |
|--------------|--------------------|--------|--------------------------------------|
| const double | <b>y_vec [ 2 ]</b> | Input  | Vector for the Y-direction of matrix |
| double       | <b>mtx [ 4 ]</b>   | Output | Matrix                               |

**UF\_MTX2\_multiply** [\(view source\)](#)

Defined in: `uf_mtx.h`

**Overview**

Returns a 2x2 matrix product from two input matrices.

**Return**

void

**Environment**

Internal and External

**Required License(s)**

gateway

```
void UF_MTX2_multiply
(
    const double mtx1 [ 4 ],
    const double mtx2 [ 4 ],
    double mtx_product [ 4 ]
)
```

|              |                          |        |   |
|--------------|--------------------------|--------|---|
| const double | <b>mtx1 [ 4 ]</b>        | Input  | Matrix #1                                   |
| const double | <b>mtx2 [ 4 ]</b>        | Input  | Matrix #2                                   |
| double       | <b>mtx_product [ 4 ]</b> | Output | Matrix product<br>mtx_product = mtx1 X mtx2 |

**UF\_MTX2\_multiply\_t** [\(view source\)](#)

Defined in: `uf_mtx.h`

**Overview**

Returns a 2x2 matrix product by transposing matrix #1 before performing the multiplication.

**Return**

void

**Environment**

Internal and External

**Required License(s)**

gateway

```
void UF_MTX2_multiply_t
(
    const double mtx1 [ 4 ],
    const double mtx2 [ 4 ],
    double mtx_product [ 4 ]
)
```

|              |                          |        |  |
|--------------|--------------------------|--------|--|
| const double | <b>mtx1 [ 4 ]</b>        | Input  | Matrix #1 gets transposed before the multiplication.     |
| const double | <b>mtx2 [ 4 ]</b>        | Input  | Matrix #2  |
| double       | <b>mtx_product [ 4 ]</b> | Output | Matrix product<br>mtx_product = Transpose of mtx1 X mtx2 |

**UF\_MTX2\_transpose** [\(view source\)](#)

Defined in: `uf_mtx.h`

**Overview**

Returns the transpose of a 2x2 matrix.

**Return**

void

**Environment**

Internal and External

**Required License(s)**

gateway

```
void UF_MTX2_transpose
(
    const double mtx [ 4 ],
    double transpose_mtx [ 4 ]
)
```

|              |                            |        |                               |
|--------------|----------------------------|--------|-------------------------------|
| const double | <b>mtx [ 4 ]</b>           | Input  | Matrix to transpose           |
| double       | <b>transpose_mtx [ 4 ]</b> | Output | Transpose of the input matrix |

**UF\_MTX2\_vec\_multiply** [\(view source\)](#)

Defined in: `uf_mtx.h`

**Overview**

Returns a 2D vector which is the product of a 2D vector and a 2x2 matrix.

**Return**  
void

**Environment**  
Internal and External

**Required License(s)**  
gateway

```
void UF_MTX2_vec_multiply
(
    const double vec [ 2 ],
    const double mtx [ 4 ],
    double vec_product [ 2 ]
)
```

|              |                          |        |   |
|--------------|--------------------------|--------|---|
| const double | <b>vec [ 2 ]</b>         | Input  | Vector to multiply                            |
| const double | <b>mtx [ 4 ]</b>         | Input  | Matrix to multiply                            |
| double       | <b>vec_product [ 2 ]</b> | Output | Product (a vector)<br>vec_product = vec X mtx |

**UF\_MTX2\_vec\_multiply\_t** [\(view source\)](#)

Defined in: `uf_mtx.h`

**Overview**  
Returns a 2D vector which is the product of a 2D vector and a transposed 2x2 matrix.

**Return**  
void

**Environment**  
Internal and External

**Required License(s)**  
gateway

```
void UF_MTX2_vec_multiply_t
(
    const double vec [ 2 ],
    const double mtx [ 4 ],
    double vec_product [ 2 ]
)
```

|              |                          |        |  |
|--------------|--------------------------|--------|--|
| const double | <b>vec [ 2 ]</b>         | Input  | Vector to multiply   |
| const double | <b>mtx [ 4 ]</b>         | Input  | Matrix to transpose and multiply                           |
| double       | <b>vec_product [ 2 ]</b> | Output | Product (a vector)<br>vec_product = vec X transpose of mtx |

**UF\_MTX2\_x\_vec** [\(view source\)](#)

Defined in: `uf_mtx.h`

**Overview**

Returns the X-direction vector of a 2x2 matrix.

**Return**

void

**Environment**

Internal and External

**Required License(s)**

gateway

```
void UF_MTX2_x_vec
(
    const double mtx [ 4 ],
    double x_vec [ 2 ]
)
```

|              |                    |        |                                      |
|--------------|--------------------|--------|--------------------------------------|
| const double | <b>mtx [ 4 ]</b>   | Input  | Matrix whose X-direction is required |
| double       | <b>x_vec [ 2 ]</b> | Output | X-direction vector of the matrix     |

**UF\_MTX2\_y\_vec** [\(view source\)](#)

Defined in: `uf_mtx.h`

**Overview**

Returns the Y-direction vector of a 2x2 matrix.

**Return**

void

**Environment**

Internal and External

**Required License(s)**

gateway

```
void UF_MTX2_y_vec
(
    const double mtx [ 4 ],
    double y_vec [ 2 ]
)
```

|              |                  |       |                                      |
|--------------|------------------|-------|--------------------------------------|
| const double | <b>mtx [ 4 ]</b> | Input | Matrix whose Y-direction is required |
|--------------|------------------|-------|--------------------------------------|

|        |                    |        |                                  |
|--------|--------------------|--------|----------------------------------|
| double | <b>y_vec [ 2 ]</b> | Output | Y-direction vector of the matrix |
|--------|--------------------|--------|----------------------------------|

**UF\_MTX3\_copy** [\(view source\)](#)

Defined in: `uf_mtx.h`

**Overview**

Copies the matrix elements from a source 3x3 matrix to a destination 3x3 matrix.

**Return**

void

**Environment**

Internal and External

**Required License(s)**

gateway

```
void UF_MTX3_copy
(
    const double mtx_src [ 9 ] ,
    double mtx_dst [ 9 ]
)
```

|              |                      |        |                    |
|--------------|----------------------|--------|--------------------|
| const double | <b>mtx_src [ 9 ]</b> | Input  | Source matrix      |
| double       | <b>mtx_dst [ 9 ]</b> | Output | Destination matrix |

**UF\_MTX3\_determinant** [\(view source\)](#)

Defined in: `uf_mtx.h`

**Overview**

Calculates the determinant of a 3 x 3 matrix.

**Return**

void

**Environment**

Internal and External

**Required License(s)**

gateway

```
void UF_MTX3_determinant
(
    const double mtx [ 9 ] ,
    double * determinant
)
```

|              |                    |        |                                      |
|--------------|--------------------|--------|--------------------------------------|
| const double | <b>mtx [ 9 ]</b>   | Input  | Matrix whose determinant in required |
| double *     | <b>determinant</b> | Output | Matrix determinant                   |

**UF\_MTX3\_identity** [\(view source\)](#)

Defined in: `uf_mtx.h`

**Overview**

Returns a 3 x 3 identity matrix.

**Return**

void

**Environment**

Internal and External

**Required License(s)**

gateway

```
void UF_MTX3_identity
(
    double identity_mtx [ 9 ]
)
```

|        |                           |        |                 |
|--------|---------------------------|--------|-----------------|
| double | <b>identity_mtx [ 9 ]</b> | Output | Identity Matrix |
|--------|---------------------------|--------|-----------------|

**UF\_MTX3\_initialize** [\(view source\)](#)

Defined in: `uf_mtx.h`

**Overview**

Returns a 3x3 matrix formed from two input 3D vectors. The two input vectors are normalized and the y-direction vector is made orthogonal to the x-direction vector before taking the cross product (x\_vec X y\_vec) to generate the z-direction vector.

**Return**

Return value:  
0 = Success (vectors define a valid matrix)  
1 = Matrix cannot be defined

**Environment**

Internal and External

**Required License(s)**

gateway

```
int UF_MTX3_initialize
(
    const double x_vec [ 3 ],
    const double y_vec [ 3 ],
    double mtx [ 9 ]
)
```

|              |                    |        |                                      |
|--------------|--------------------|--------|--------------------------------------|
| const double | <b>x_vec [ 3 ]</b> | Input  | Vector for the X-direction of matrix |
| const double | <b>y_vec [ 3 ]</b> | Input  | Vector for the Y-direction of matrix |
| double       | <b>mtx [ 9 ]</b>   | Output | Matrix                               |

**UF\_MTX3\_initialize\_x** [\(view source\)](#)

Defined in: `uf_mtx.h`

**Overview**

Returns a 3x3 matrix with the given X-direction vector and having arbitrary Y- and Z-direction vectors.

**Return**

Returns 0 if the input vector is nonzero; returns 1 otherwise.

**Environment**

Internal and External

**Required License(s)**

gateway

```
int UF_MTX3_initialize_x
(
    const double x_vec [ 3 ],
    double mtx [ 9 ]
)
```

|              |                    |        |                                      |
|--------------|--------------------|--------|--------------------------------------|
| const double | <b>x_vec [ 3 ]</b> | Input  | Vector for the X-direction of matrix |
| double       | <b>mtx [ 9 ]</b>   | Output | Matrix (3x3)                         |

**UF\_MTX3\_initialize\_z** [\(view source\)](#)

Defined in: `uf_mtx.h`

**Overview**

Returns a 3x3 matrix with the given Z-direction vector and having arbitrary X- and Y-direction vectors.

**Return**

Returns 0 if the input vector is nonzero;  
returns 1 otherwise.

Environment

Internal and External

Required License(s)

gateway

```
int UF_MTX3_initialize_z
(
    const double z_vec [ 3 ],
    double mtx [ 9 ]
)
```

|              |                    |        |                                      |
|--------------|--------------------|--------|--------------------------------------|
| const double | <b>z_vec [ 3 ]</b> | Input  | Vector for the Z-direction of matrix |
| double       | <b>mtx [ 9 ]</b>   | Output | Matrix (3x3)                         |

UF\_MTX3\_mtx4 [\(view source\)](#)

Defined in: uf\_mtx.h

Overview

Converts a 3D matrix to a 4D matrix with a scale of 1.0 and a zero translation vector.

Return

void

Environment

Internal and External

Required License(s)

gateway

```
void UF_MTX3_mtx4
(
    const double mtx_3D [ 9 ],
    double mtx_4D [ 16 ]
)
```

|              |                      |        |           |
|--------------|----------------------|--------|-----------|
| const double | <b>mtx_3D [ 9 ]</b>  | Input  | 3D matrix |
| double       | <b>mtx_4D [ 16 ]</b> | Output | 4D matrix |

UF\_MTX3\_multiply [\(view source\)](#)

Defined in: uf\_mtx.h

Overview

Returns a 3x3 matrix product from two input matrices.

Return

void

Environment

Internal and External

Required License(s)

gateway

```
void UF_MTX3_multiply
(
    const double mtx1 [ 9 ],
    const double mtx2 [ 9 ],
    double mtx_product [ 9 ]
)
```

|              |                          |        |   |
|--------------|--------------------------|--------|---|
| const double | <b>mtx1 [ 9 ]</b>        | Input  | Matrix #1                                   |
| const double | <b>mtx2 [ 9 ]</b>        | Input  | Matrix #2                                   |
| double       | <b>mtx_product [ 9 ]</b> | Output | Matrix product<br>mtx_product = mtx1 X mtx2 |

UF\_MTX3\_multiply\_t [\(view source\)](#)

Defined in: uf\_mtx.h

Overview

Returns a 3x3 matrix product by transposing the first matrix before performing the multiplication.

Return

void

Environment

Internal and External

Required License(s)

gateway

```
void UF_MTX3_multiply_t
(
    const double mtx1 [ 9 ],
    const double mtx2 [ 9 ],
    double mtx_product [ 9 ]
)
```

|              |                   |       |  |
|--------------|-------------------|-------|--|
| const double | <b>mtx1 [ 9 ]</b> | Input | Matrix #1 gets transposed before the multiplication. |
| const double | <b>mtx2 [ 9 ]</b> | Input | Matrix #2  |

|        |                          |        |   |
|--------|--------------------------|--------|---|
| double | <b>mtx_product [ 9 ]</b> | Output | Matrix product<br>mtx_product = trns(mtx1) X mtx2 |
|--------|--------------------------|--------|---|

## UF\_MTX3\_ortho\_normalize [\(view source\)](#)

Defined in: uf\_mtx.h

### Overview

Returns a 3x3 matrix whose direction vectors are orthogonal and of unit length.

### Return

void

### Environment

Internal and External

### Required License(s)

gateway

```
void UF_MTX3_ortho_normalize
(
    double mtx [ 9 ]
)
```

|        |                  |                |   |
|--------|------------------|----------------|---|
| double | <b>mtx [ 9 ]</b> | Input / Output | Matrix to be ortho-normalized. (Input)<br>Ortho-normalized matrix. (Output) |
|--------|------------------|----------------|---|

## UF\_MTX3\_rotate\_about\_axis [\(view source\)](#)

Defined in: uf\_mtx.h

### Overview

Returns a 3x3 rotation matrix about an axis and through a specified angle of rotation.

### Return

void

### Environment

Internal and External

### Required License(s)

gateway

```
void UF_MTX3_rotate_about_axis
(
    const double rotation_axis [ 3 ],
    double rotation_angle,
    double mtx [ 9 ]
)
```

)

|              |                            |        |                                    |
|--------------|----------------------------|--------|------------------------------------|
| const double | <b>rotation_axis [ 3 ]</b> | Input  | Vector of the rotation axis        |
| double       | <b>rotation_angle</b>      | Input  | Angle of the rotation (in radians) |
| double       | <b>mtx [ 9 ]</b>           | Output | Rotation Matrix                    |

**UF\_MTX3\_transpose** [\(view source\)](#)

Defined in: `uf_mtx.h`

**Overview**

Returns the transpose of a 3x3 matrix.

**Return**

void

**Environment**

Internal and External

**Required License(s)**

gateway

```
void UF_MTX3_transpose
(
    const double mtx [ 9 ],
    double transpose_mtx [ 9 ]
)
```

|              |                            |        |  |
|--------------|----------------------------|--------|--|
| const double | <b>mtx [ 9 ]</b>           | Input  | Matrix to transpose                            |
| double       | <b>transpose_mtx [ 9 ]</b> | Output | Transposed matrix<br>transpose_mtx = trns(mtx) |

**UF\_MTX3\_vec\_multiply** [\(view source\)](#)

Defined in: `uf_mtx.h`

**Overview**

Returns a vector which is the product of a 3D vector and a 3x3 matrix.

**Return**

void

**Environment**

Internal and External

**Required License(s)**

gateway

```
void UF_MTX3_vec_multiply
(
    const double vec [ 3 ],
    const double mtx [ 9 ],
    double vec_product [ 3 ]
)
```

|              |                          |        |   |
|--------------|--------------------------|--------|---|
| const double | <b>vec [ 3 ]</b>         | Input  | Vector to multiply                            |
| const double | <b>mtx [ 9 ]</b>         | Input  | Matrix to multiply                            |
| double       | <b>vec_product [ 3 ]</b> | Output | Product (a vector)<br>vec_product = vec X mtx |

**UF\_MTX3\_vec\_multiply\_t** [\(view source\)](#)

Defined in: `uf_mtx.h`

**Overview**

Returns a vector which is the product of a 3D vector and a transposed 3x3 matrix.

**Return**

void

**Environment**

Internal and External

**Required License(s)**

gateway

```
void UF_MTX3_vec_multiply_t
(
    const double vec [ 3 ],
    const double mtx [ 9 ],
    double vec_product [ 3 ]
)
```

|              |                          |        |   |
|--------------|--------------------------|--------|---|
| const double | <b>vec [ 3 ]</b>         | Input  | Vector to multiply                                  |
| const double | <b>mtx [ 9 ]</b>         | Input  | Matrix to transpose and multiply                    |
| double       | <b>vec_product [ 3 ]</b> | Output | Product (a vector)<br>vec_product = vec X trns(mtx) |

**UF\_MTX3\_x\_vec** [\(view source\)](#)

Defined in: `uf_mtx.h`

Overview

Returns the X-direction vector of a matrix.

Return

void

Environment

Internal and External

Required License(s)

gateway

```
void UF_MTX3_x_vec
(
    const double mtx [ 9 ],
    double x_vec [ 3 ]
)
```

|              |                    |        |  |
|--------------|--------------------|--------|--|
| const double | <b>mtx [ 9 ]</b>   | Input  | 3x3 Matrix whose X-direction is required |
| double       | <b>x_vec [ 3 ]</b> | Output | X-direction vector of the matrix         |

UF\_MTX3\_y\_vec [\(view source\)](#)

Defined in: `uf_mtx.h`

Overview

Returns the Y-direction vector of a 3x3 matrix.

Return

void

Environment

Internal and External

Required License(s)

gateway

```
void UF_MTX3_y_vec
(
    const double mtx [ 9 ],
    double y_vec [ 3 ]
)
```

|              |                    |        |                                      |
|--------------|--------------------|--------|--------------------------------------|
| const double | <b>mtx [ 9 ]</b>   | Input  | Matrix whose Y-direction is required |
| double       | <b>y_vec [ 3 ]</b> | Output | Y-direction vector of the matrix     |

**UF\_MTX3\_z\_vec** [\(view source\)](#)

Defined in: `uf_mtx.h`

**Overview**

Returns the Z-direction vector of a 3x3 matrix.

**Return**

void

**Environment**

Internal and External

**Required License(s)**

gateway

```
void UF_MTX3_z_vec
(
    const double mtx [ 9 ],
    double z_vec [ 3 ]
)
```

|              |                    |        |                                      |
|--------------|--------------------|--------|--------------------------------------|
| const double | <b>mtx [ 9 ]</b>   | Input  | Matrix whose Z-direction is required |
| double       | <b>z_vec [ 3 ]</b> | Output | Z-direction vector of the matrix     |

**UF\_MTX4\_ask\_rotation** [\(view source\)](#)

Defined in: `uf_mtx.h`

**Overview**

Returns the 3x3 rotation matrix of a 4x4 matrix.

**Return**

void

**Environment**

Internal and External

**Required License(s)**

gateway

```
void UF_MTX4_ask_rotation
(
    const double mtx_4D [ 16 ],
    double mtx_3D [ 9 ]
)
```

|              |                      |        |                                       |
|--------------|----------------------|--------|---------------------------------------|
| const double | <b>mtx_4D [ 16 ]</b> | Input  | 4x4 matrix whose rotation is required |
| double       | <b>mtx_3D [ 9 ]</b>  | Output | 3x3 rotation matrix of the 4x4 matrix |

**UF\_MTX4\_ask\_scale** [\(view source\)](#)

Defined in: `uf_mtx.h`

**Overview**

Returns the scale factor of a 4x4 matrix.

**Return**

void

**Environment**

Internal and External

**Required License(s)**

gateway

```
void UF_MTX4_ask_scale
(
    const double mtx [ 16 ],
    double * scale
)
```

|              |                   |        |                                 |
|--------------|-------------------|--------|---------------------------------|
| const double | <b>mtx [ 16 ]</b> | Input  | Matrix whose scale is required. |
| double *     | <b>scale</b>      | Output | Scale factor of the matrix      |

**UF\_MTX4\_ask\_translation** [\(view source\)](#)

Defined in: `uf_mtx.h`

**Overview**

Returns the translation vector of a 4x4 matrix.

**Return**

void

**Environment**

Internal and External

**Required License(s)**

gateway

```
void UF_MTX4_ask_translation
(
    const double mtx [ 16 ],
    double translate_vec [ 3 ]
)
```

|              |                            |        |                                       |
|--------------|----------------------------|--------|---------------------------------------|
| const double | <b>mtx [ 16 ]</b>          | Input  | Matrix whose translation is required. |
| double       | <b>translate_vec [ 3 ]</b> | Output | Translation vector of the matrix      |

**UF\_MTX4\_copy** [\(view source\)](#)

Defined in: `uf_mtx.h`

**Overview**

Copies 4x4 matrix elements from the source matrix to the destination matrix.

**Return**

void

**Environment**

Internal and External

**Required License(s)**

gateway

```
void UF_MTX4_copy
(
    const double mtx_src [ 16 ],
    double mtx_dst [ 16 ]
)
```

|              |                       |        |   |
|--------------|-----------------------|--------|---|
| const double | <b>mtx_src [ 16 ]</b> | Input  | Source matrix                           |
| double       | <b>mtx_dst [ 16 ]</b> | Output | Destination matrix<br>mtx_dst = mtx_src |

**UF\_MTX4\_csys\_to\_csys** [\(view source\)](#)

Defined in: `uf_mtx.h`

**Overview**

Returns the matrix which can be used to map from one csys to another.

**Environment**

Internal and External

**See Also**

Refer to [example](#)

**History**

Originally released in V16.0

**Required License(s)**

gateway

|--------------|----------------------------|-------|---|
| const double | <b>translate_vec [ 3 ]</b> | Input | Translation vector to use as replacement in 4x4 matrix. |
|--------------|----------------------------|-------|---|

## UF\_MTX4\_identity [\(view source\)](#)

Defined in: `uf_mtx.h`

### Overview

Returns a 4 x 4 identity matrix.

### Return

void

### Environment

Internal and External

### Required License(s)

gateway

```
void UF_MTX4_identity
(
    double identity_mtx [ 16 ]
)
```

|        |                            |        |                 |
|--------|----------------------------|--------|-----------------|
| double | <b>identity_mtx [ 16 ]</b> | Output | Identity Matrix |
|--------|----------------------------|--------|-----------------|

## UF\_MTX4\_initialize [\(view source\)](#)

Defined in: `uf_mtx.h`

### Overview

Returns the 4x4 matrix formed from a 3x3 rotation matrix, a 3D translation vector, and a scale factor.

### Return

void

### Environment

Internal and External

### Required License(s)

gateway

```
void UF_MTX4_initialize
(
    double scale,
    const double translation_vec [ 3 ],
    const double mtx_3D [ 9 ],
    double mtx_4D [ 16 ]
)
```

|              |                              |        |                     |
|--------------|------------------------------|--------|---------------------|
| double       | <b>scale</b>                 | Input  | Scale factor        |
| const double | <b>translation_vec [ 3 ]</b> | Input  | Translation vector  |
| const double | <b>mtx_3D [ 9 ]</b>          | Input  | 3x3 rotation matrix |
| double       | <b>mtx_4D [ 16 ]</b>         | Output | 4x4 matrix          |

## UF\_MTX4\_invert [\(view source\)](#)

Defined in: `uf_mtx.h`

### Overview

Returns the matrix which is the invert of the input one

### Return

Return value:  
0 = Success (inverted matrix created)  
n = Matrix not defined

### Environment

Internal and External

### History

Originally released in V18.0

### Required License(s)

gateway

```
int UF_MTX4_invert
(
    const double mtx_in [ 16 ],
    double mtx_out [ 16 ]
)
```

|              |                       |        |                          |
|--------------|-----------------------|--------|--------------------------|
| const double | <b>mtx_in [ 16 ]</b>  | Input  | Input matrix             |
| double       | <b>mtx_out [ 16 ]</b> | Output | Returned inverted matrix |

## UF\_MTX4\_mirror [\(view source\)](#)

Defined in: `uf_mtx.h`

### Overview

Returns the matrix which can be used to mirror about a plane

### Environment

Internal and External

### See Also

Refer to [example](#)

History

Originally released in V16.0

Required License(s)

gateway

    const double origin [ 3 ],
    const double normal [ 3 ],
    double mtx [ 16 ]
)
```

|              |                     |        |  |
|--------------|---------------------|--------|--|
| const double | <b>origin [ 3 ]</b> | Input  | The origin of the plane.                             |
| const double | <b>normal [ 3 ]</b> | Input  | The plane normal                                     |
| double       | <b>mtx [ 16 ]</b>   | Output | Returned matrix that can be used to tranform objects |

UF\_MTX4\_multiply [\(view source\)](#)

Defined in: `uf_mtx.h`

Overview

Returns a 4x4 matrix product from two input matrices.

Return

void

Environment

Internal and External

Required License(s)

gateway

```
void UF_MTX4_multiply
(
    const double mtx1 [ 16 ],
    const double mtx2 [ 16 ],
    double mtx_product [ 16 ]
)
```

|              |                           |        |   |
|--------------|---------------------------|--------|---|
| const double | <b>mtx1 [ 16 ]</b>        | Input  | Matrix #1                                   |
| const double | <b>mtx2 [ 16 ]</b>        | Input  | Matrix #2                                   |
| double       | <b>mtx_product [ 16 ]</b> | Output | Matrix product<br>mtx_product = mtx1 X mtx2 |

**UF\_MTX4\_multiply\_t** [\(view source\)](#)

Defined in: `uf_mtx.h`

**Overview**

Returns a 4x4 matrix product by transposing the first matrix before performing the multiplication.

**Return**

void

**Environment**

Internal and External

**Required License(s)**

gateway

```
void UF_MTX4_multiply_t
(
    const double mtx1 [ 16 ],
    const double mtx2 [ 16 ],
    double mtx_product [ 16 ]
)
```

|              |                           |        |  |
|--------------|---------------------------|--------|--|
| const double | <b>mtx1 [ 16 ]</b>        | Input  | Matrix #1 gets transposed before the multiplication. |
| const double | <b>mtx2 [ 16 ]</b>        | Input  | Matrix #2  |
| double       | <b>mtx_product [ 16 ]</b> | Output | Matrix product<br>mtx_product = trns(mtx1) X mtx2    |

**UF\_MTX4\_ortho\_normalize** [\(view source\)](#)

Defined in: `uf_mtx.h`

**Overview**

Returns a 4x4 matrix whose direction vectors are orthogonal and of unit length.

**Return**

void

**Environment**

Internal and External

**Required License(s)**

gateway

```
void UF_MTX4_ortho_normalize
(
    double mtx [ 16 ]
)
```

|        |                   |                |   |
|--------|-------------------|----------------|---|
| double | <b>mtx [ 16 ]</b> | Input / Output | Matrix to be ortho-normalized. (Input)<br>Ortho-normalized matrix. (Output) |
|--------|-------------------|----------------|---|

**UF\_MTX4\_rotation** [\(view source\)](#)

Defined in: `uf_mtx.h`

**Overview**

Returns the matrix which can be used to rotate about a point

**Environment**

Internal and External

**See Also**

Refer to [example](#)

**History**

Originally released in V16.0

**Required License(s)**

gateway

```
int UF_MTX4_rotation
(
    const double rotation_point [ 3 ],
    const double rotation_axis [ 3 ],
    const double angle,
    double mtx [ 16 ]
)
```

|              |                             |        |  |
|--------------|-----------------------------|--------|--|
| const double | <b>rotation_point [ 3 ]</b> | Input  | Point about which the rotation is to be performed.   |
| const double | <b>rotation_axis [ 3 ]</b>  | Input  | Axis about which rotation to occur.                  |
| const double | <b>angle</b>                | Input  | rotation angle in degrees                            |
| double       | <b>mtx [ 16 ]</b>           | Output | returned matrix that can be used to tranform objects |

**UF\_MTX4\_scaling** [\(view source\)](#)

Defined in: `uf_mtx.h`

**Overview**

Returns the matrix using scaling and invariant point information.

**Environment**

Internal and External

**See Also**

Refer to [example](#)

History

Originally released in V16.0

Required License(s)

gateway

```
int UF_MTX4_scaling
(
    const double invariant_point [ 3 ],

    double mtx [ 16 ]
)
```

|              |                              |        |   |
|--------------|------------------------------|--------|---|
| const double | <b>invariant_point [ 3 ]</b> | Input  | Point which will be invariant to the scaling, in other words the center point of the scale operation. |
| const double | <b>scale [ 3 ]</b>           | Input  | scaling in x, y, z directions   |
| double       | <b>mtx [ 16 ]</b>            | Output | returned matrix that can be used to tranform objects  |

UF\_MTX4\_transpose [\(view source\)](#)

Defined in: uf\_mtx.h

Overview

Returns the transpose of a 4x4 matrix.

Return

void

Environment

Internal and External

Required License(s)

gateway

```
void UF_MTX4_transpose
(
    const double mtx [ 16 ],
    double transpose_mtx [ 16 ]
)
```

|              |                             |        |  |
|--------------|-----------------------------|--------|--|
| const double | <b>mtx [ 16 ]</b>           | Input  | Matrix to transpose                            |
| double       | <b>transpose_mtx [ 16 ]</b> | Output | Transposed matrix<br>transpose_mtx = trns(mtx) |

**UF\_MTX4\_vec3\_multiply** [\(view source\)](#)

Defined in: `uf_mtx.h`

**Overview**

Returns a 3D vector which is the product of a 3D vector and a 4x4 matrix. The 3D vector is treated as a 4D vector with a weight of 1.0.

**Return**

void

**Environment**

Internal and External

**Required License(s)**

gateway

)
```

|              |                          |        |   |
|--------------|--------------------------|--------|---|
| const double | <b>vec [ 4 ]</b>         | Input  | Vector to multiply                            |
| const double | <b>mtx [ 16 ]</b>        | Input  | Matrix to multiply                            |
| double       | <b>vec_product [ 4 ]</b> | Output | Product (a vector)<br>vec_product = vec X mtx |

**UF\_MTX4\_vec\_multiply\_t** [\(view source\)](#)

Defined in: `uf_mtx.h`

**Overview**

Returns a vector which is the product of a 4D vector and a transposed matrix.

**Return**

void

Environment

Internal and External

Required License(s)

gateway

```
void UF_MTX4_vec_multiply_t
(
    const double vec [ 4 ] ,
    const double mtx [ 16 ] ,
    double vec_product [ 4 ]
)
```

|              |                          |        |   |
|--------------|--------------------------|--------|---|
| const double | <b>vec [ 4 ]</b>         | Input  | Vector to multiply                                  |
| const double | <b>mtx [ 16 ]</b>        | Input  | Matrix to transpose and multiply                    |
| double       | <b>vec_product [ 4 ]</b> | Output | Product (a vector)<br>vec_product = vec X trns(mtx) |

UF\_MTX4\_x\_vec [\(view source\)](#)

Defined in: uf\_mtx.h

Overview

Returns the X-direction vector of the 3x3 rotation of a 4x4 matrix.

Return

void

Environment

Internal and External

Required License(s)

gateway

```
void UF_MTX4_x_vec
(
    const double mtx [ 16 ] ,
    double x_vec [ 3 ]
)
```

|              |                    |        |  |
|--------------|--------------------|--------|--|
| const double | <b>mtx [ 16 ]</b>  | Input  | 4x4 Matrix whose X-direction is required |
| double       | <b>x_vec [ 3 ]</b> | Output | X-direction vector of the matrix         |

**UF\_MTX4\_y\_vec** [\(view source\)](#)

Defined in: `uf_mtx.h`

**Overview**

Returns the Y-direction vector of the 3x3 rotation of a 4x4 matrix.

**Return**

void

**Environment**

Internal and External

**Required License(s)**

gateway

```
void UF_MTX4_y_vec
(
    const double mtx [ 16 ],
    double y_vec [ 3 ]
)
