

UF_NX2D_import_file [\(view source\)](#)

Defined in: `uf_nx2d.h`

Overview

Imports an NX-2D file into NX. The geometry imported will be created in the current work part.

Return

Return code:
0 = No error
not 0 = Error code

Environment

Internal and External

History

Originally released in nx1.0.1

```
int UF_NX2D_import_file
(
    const char * filename,
    logical skip_hidden_wireframe,
    logical import_as_sketch
)
```

const char *	filename	Input	File specification for the NX2D file to import.
logical	skip_hidden_wireframe	Input	Not used. The NX2D import file will not contain hidden wireframe geometry in the first place so this parameter has no effect. May be True or False.
logical	import_as_sketch	Input	If TRUE, the NX-2D wireframe data will be imported as sketches.
